

CUSTOM SCIENTIFIC CALCULATOR

In this document I will be elaborating the working of Windows 10 like calculator developed by Asfand Tariq.

Working of Calculator:

First you have to click/type the number which you want to perform any function with then type the function for example + and then the second the number after that click on equals to (=) button, the result will be printed on screen. Let's take a look on given screen shot.

In these screen short I portray how addition will perform between two numbers. Futhermore if you want to perform any other operation you can do in the described way.

In this calculator there are some scientific functions like sin,sin-1 ,cos , cos-1, tan, tan-1 etc you can also perform these functions by just typing the digit on which you want to perform the desired operation and then click on the scientific function fter that you will get your desired output on your screen.

Scope of Calculator:

This calculator can be expanded further by adding more complex scientific methods like log x, graph and much more according to requirements.

Tools/Strategy:

To make it possible like windows 10 calculator I tried my best using windows form C# and make it responsive calculator.
